# DERWENT TITLE TERMS

## Searchable Preferred Forms of Title Words

### Introduction

Derwent Title Terms are used to simplify word searching of Derwent titles, and to optimise the thoroughness of such searches. All given derivatives of a Title Term are collected under a MAIN TERM. The derivatives are called Sub-terms.

Whenever either a MAIN TERM or a Sub-term appears in a Derwent title, only the corresponding MAIN TERM is posted to the online file as a Title Term.

Example: Searching the Title Term for DESALINATE will capture all records in which desalinate or any of the ten Sub-terms appears in a Derwent title.

DESALINATE	←	MAIN TERM
Desalinated		
Desalinating		
Desalination		
Desalinator		
Desalinators	←	Sub-terms
Desalt		
Desalted		
Desalter		
Desalters		
Desalting		

### Searching Title Words

Both MAIN TERMS and Sub-terms can be searched as Title Words. In addition, any other words not in the Title Terms list but appearing in titles may also be searched as Title Words, the only exceptions being the commonly used Stop Words:

AN, AND, ARE, AS, AT, BE, BY, FOR, FROM, HAS, IN, INTO, IS, NOT, OF, ON, OR, THE, THEN, WHEN, WHERE, WHICH

## Format of the Manual

The MAIN TERMS are shown in UPPER CASE and listed in alphabetical order. Sub-terms are in lower case, indented below the corresponding MAIN TERM.

The year of introduction of new terms is shown in square brackets [ ]. New terms may be searched via Title Terms from their date of introduction. Prior to that date they may be searched as Title Words. In the example below *Determiner* introduced in 1991, is searchable as a Title Term from 199101 onwards and prior to that it should be searched as a Title Word.

DETERMINE	←	MAIN TERM	
Determinable			
Determinant			
Determinants			
Determination			
Determinations			
Determined			
Determiner [1991]	←	Year of introduction.	
Determines			
Determining			
Determn			
DETONATE			
Detonatable			
Detonated			
Detonates			
Detonating			
Detonation			
Detonations			
Detonator			
Detonators			
DETOUR [1991]	←	Year of introduction.	
DETOXICANT			

As from 199101 all occurrences of this sub-term will be posted as the MAIN TERM and will be searchable as the Title Term

## Use of the = sign (effective from Derwent Week 197804)

Certain single concept terms consist of two or more parts linked together by an = sign. This allows specific retrieval of multipart terms.

Examples are:

AND=GATE	U=BEAM
I=BEAM	U=BEND
X=RAY	U=bends
VITAMIN=A	U=bent

The method for searching these terms varies on each of the online services.

On Dialog search	? s port-hole/de
On Questel.Orbit search	?/tt "port=hole"
On STN search	=> s by-product/tt

**Use of the @ sign** (*effective from Week 197804*)

Certain frequently occurring compounds and elements are given an @ sign to indicate the unsubstituted compound or the free or alloyed element. The @ is a part of the search term. Thus PHENOL@ PRODN. refers to the specific compound whereas in HALOGEN-SUBSTD. PHENOL DERIVS. PRODN. the @ sign is not used.

Terms which can take the @ sign are listed below:

ACETONE	COPPER	PHOSPHORUS
ALCOHOL (i.e. ethanol)	ETHANOL	PLATINUM
ALUMINIUM	ETHER (i.e. diethyl ether)	POLYETHYLENE
ANTIMONY	ETHYLENE	POLYPROPYLENE
ARSENIC	FLUORINE	POTASSIUM
BARIUM	GOLD	PROPYLENE
BENZENE	HYDROGEN	PYRIDINE
BISMUTH	IODINE	SELENIUM
BORON	IRON	SILICON
BROMINE	LEAD	SILVER
OXYGEN	LITHIUM	SODIUM
CADMIUM	MAGNESIUM	SULPHUR
CAESIUM	MANGANESE	TIN
CALCIUM	MERCURY	TITANIUM
CARBON	MOLYBDENUM	TOLUENE
CELLULOSE	NAPHTHALENE	TUNGSTEN
CERIUM	NICKEL	URANIUM
CHLORINE	NITROGEN	VANADIUM
CHROMIUM	PALLADIUM	ZINC
COBALT	PHENOL	ZIRCONIUM

**Acronyms**

The Manual contains some very useful acronyms and abbreviations which can be used to retrieve multiword concepts by means of a single search term, for example

MOSFET, IMPATT, CCD, LSI.

## Chemical Names

For storage and retrieval purposes long chemical names are split so that the resulting parts correspond to Title Terms where possible. In compiling this Manual the commoner chemical moieties were kept together and the rarer ones usually split into separate terms. Multiplier prefixes, e.g. MONO, DI and TRI were normally treated as separate terms except in trade names or ring systems. Thus for 'trifluoromethylpyrimidine' the relevant search terms are TRI, FLUOROMETHYL and PYRIMIDINE.

## Polymers

Since Week 197804 monomers in titles which refer to a polymer rather than the monomer itself have been converted to the poly... form for online storage and retrieval by addition of an exclamation mark (!), providing that the poly... term is in the list of Title Terms.

For example, polyacrolein can be input as 'polyacrolein' or 'acrolein! polymer' and searching POLYACROLEIN as a Title Term would retrieve 'polyacrolein', 'acrolein polymer' and 'acrolein-styrene copolymer'.

When less common polymer abbreviations are used in titles, e.g. PVF, the full form is input as Additional Words, which are stored as Title Terms. Thus a search for POLYVINYL as a Title Term will also retrieve PVF.

## Searching Abstract Words

Words used in the Derwent Alerting abstracts are not text edited against the list of Title Terms - the automatic posting of MAIN TERMS applies only to the Derwent titles. However, when searching the Abstract Words field, this Manual can still be helpful as a guide to spelling and variations.

## Use of Online Lists and Facilities

The Expand, Neighbor or Index online commands can be used to obtain a list of searchable subject words together with the current number of postings. These subject terms may include Title Terms, Title Words and Abstract Words and may therefore include words which are not in this Manual. Unless specified, searching will include all categories of words (i.e. all are in the Basic index) or searching may be restricted to specific fields, e.g. Title Terms. Truncation may be used when appropriate.

Title Terms, Title Words and Abstract Words are proximity searchable. A proximity search can specify that two terms must be adjacent or included within a given number of words. This allows specific combinations of terms to be searched within a required context and prevents retrieval of irrelevant references.

Further details of these procedures are given in the Online User Manuals.
